

## Web technology

1. Describe Client Server Architecture of the Internet.
  2. What is Intranet? Explain its uses.
  3. What is DNS? Explain it with an example.
  4. Differentiate between ARP and RAR
- How does DNS increase web performance?
6. Create a HTML file to demonstrate Ordered Lists and unordered List.
  7. Create a HTML file to design a table to show current month calendar.
  8. Create a registration form using HTML with Text input, textarea, radio button, checkbox and submit button.
  9. What is Extranet? Explain its uses.
  10. What is Subdomain? Explain it with an example.
  11. Explain different types of ARP.
  12. Explain different type of DNS records.
  13. Write down about different FTP types.
  14. Write down about the encoded data which is contained by a HTTP request.
  15. Create a registration form using HTML with Text input, textarea, radio button, checkbox and submit button.
  16. How does DNS increase web performance?
  17. Create a HTML file to design a table to show current month calendar.
  18. Describe different methods required for Network Security.
  19. Write down the characteristics of Selective Repeat Protocol (SRP) protocol.
  20. What is IP Masquerading
  21. Write down its Pros & Cons
  22. What is a Secure Socket Layer? How does SSL
  23. Why is SSL Important?
  24. What are cookies? Write down the basic uses.
  25. State about three different types of it with example
  26. Describe different methods required for Network Security
  27. What is a Secure Socket Layer? How does SSL work
  28. Create a HTML file to design a table to show current month calendar
  29. Describe different methods required for Network Security
  30. Using HTML, CSS create a rotate effect for the image on hover
  31. What is UDP?
  32. Describe UDP Packets with a suitable picture.?
  33. What is the difference between SMTP, POP3, and IMAP.
  34. Write a javascript program to make the abbreviation of a given name as input. (Ex: Ramesh Chandra Das - R.C.Das)
  35. Describe Class less Addressing with a suitable example. Demonstrate the benefits of it over Class-full address
  36. Describe elaborately the life cycle of a packet through different layers of protocol it passes through when it traverse from Source to destination.
  37. Write Short notes on
- Go Back N ARQ

TCP connection Life Cycle  
Inter Domain Routing  
Spanning Tree Broad

38. Write a JavaScript program to divide a given array of positive integers into two parts. First element belongs to the first part, second element belongs to the second part, and third element belongs to the first part and so on. Now compute the sum of two parts and store it in an array of size two.

39.A) With the help of the picture of Internet Protocol Version 4 (IPv4) Datagram Format describe at least 5 fields along with its functionalities.

B) Write down the difference between IPV4 and IPV6 datagram formats

40. Define Routing. Elaborate different types of Routing with example along with its advantages and limitations.

41. Describe Class less Addressing with a suitable example. Demonstrate the benefits of it over Class-full addressing

42. Demonstrate the benefits of it over Class-full addressing. .

(a) Write javascript code for set, get and check a cookie for a website

Write a JavaScript code to Count Frequencies of Array Element.

43. Write a JavaScript Program to Cyclically Rotate an Array by one

44. Write code to show How to Zoom an Image on Mouse Hover using CSS

45. Difference between Search Engine and Web Browser

46. Describe Class less Addressing with a suitable example.

47. Write down the difference Between Web server and Application server

48. How to reset/remove CSS styles for element

49. How to reset/remove CSS styles for element

50. How to create Table with width, 100% with Vertical Scroll inside Table body in HTML.
